# Development Bank of Southern Africa

## Update to credit analysis

### Summary

[Development Bank of Southern Africa's](#) (DBSA) Ba3 corporate family rating (CFR) reflects its Baseline Credit Assessment (BCA) of b1 and one notch rating uplift, incorporating our assumption of a "strong" probability of support from the [Government of South Africa](#) (Ba2 stable). The support assumption reflects DBSA's 100% government ownership and its developmental mandate. We also assign a Ba3 issuer rating, based on the Ba3 CFR and the application of our Loss Given Default (LGD) analysis for speculative-grade companies, reflecting the priority of claims and coverage for its capital stock. DBSA's national scale ratings are Aa3.za/P-1.za. The issuer outlook is stable.

DBSA's BCA of b1 reflects its high capital buffers, with a tangible common equity (TCE)-to-tangible managed assets ratio of 41% as of March 2023, which gives DBSA significant capacity to absorb unexpected losses. On the other hand, the b1 BCA also reflects our assessment of high asset risks, driven by the modest economic growth, high industry risks and DBSA's high sector and single-name concentrations. As of March 2023, Stage 3 (impaired) loans accounted for just 3.3% of gross loans, but with Stage 2 (underperforming/higher-risk) loans accounting for an additional 42.9%.

Funding conditions have improved following the disruption in the local debt capital market caused by the failure of state-owned Land Bank in April 2020. In addition, management is employing a more conservative liquidity approach, increasing its cash buffers and more closely monitoring its assets and liabilities maturity mismatches. Challenges remain, however, as DBSA retains its reliance on more confidence-sensitive market funding and has committed to sizeable new loan disbursements as part of its mandate.

Exhibit 1

### Rating scorecard - Key financial ratios

Source: Moody's Investors Service

## Credit strengths

- » Solid capital buffers, sufficient to absorb unexpected credit losses
- » Improving profitability metrics
- » "Strong" probability of government support

## Credit challenges

- » High industry risks and still challenging macro conditions
- » High asset risks, partly reflecting single-name and industry credit concentrations
- » Improving, but still challenging, funding and liquidity conditions

## Outlook

The stable issuer outlook is partly driven by the stable outlook on the sovereign rating, which informs our government support assumptions. The stable outlook further recognises that the strong capital buffers help cushion asset risks and pressures from a low growth environment.

## Factors that could lead to an upgrade

Upward pressure on DBSA's ratings would require both a more robust operating and macro environment accompanied by a higher sovereign rating; and/or a significant strengthening of asset quality metrics, and of its funding profile.

## Factors that could lead to a downgrade

Any weakening of the South African government's credit profile and/or willingness to support DBSA or any significant deterioration in its capacity to extend financial support, could negatively affect the ratings of DBSA. In addition, a weakening of the stand-alone credit profiles, driven by a deterioration in asset quality, liquidity and capital buffers, would also exert downward ratings pressure.

## Key indicators

## Profile

Development Bank of Southern Africa (DBSA) is a government-owned development finance institution that delivers developmental infrastructure in South Africa and the rest of the African continent. Around 71% of DBSA's gross loans were extended to South Africa

This publication does not announce a credit rating action. For any credit ratings referenced in this publication, please see the issuer/deal page on <https://ratings.moody.com> for the most updated credit rating action information and rating history.

borrowers, with the remainder disbursed in the wider sub-Saharan Africa region, including Zambia, Angola, Ghana and Cote d'Ivoire. Management focus has also shifted towards collaboration and co-funding of projects with other parties; an example of this is the set up of the Infrastructure Fund, a blended-finance infrastructure platform aimed at transforming the state's approach to infrastructure financing by bringing together public and private stakeholders and creating blended finance products and solutions.

In May 2023, DBSA sustained a cybersecurity breach involving customer and supplier data. Upon discovery of the breach, the bank immediately implemented Disaster Recovery protocols in line with its cybersecurity policy and notified the relevant authorities. DBSA has since conducted an investigation into the incident and has further strengthened its cybersecurity policy such that we believe that DBSA adequately mitigated the breach and that associated costs will not materially affect DBSA or its customers.

## Detailed credit considerations

### Consistently high capital buffers provide DBSA substantial loss absorbance capacity

We assign a capital score of A1, two notches below the initial score. The assigned score captures DBSA's solid capital levels, but also the still-difficult operating environment, which is likely to exert some negative pressure on borrowers' repayment capacity and on the bank's current capital buffers.

DBSA maintains strong capital buffers, with a TCE-to-tangible managed assets ratio of 41% as of March 2023. These capital buffers provide both substantial loss absorption capacity, as well as the potential for asset growth. The bank is obliged by the DBSA Act to maintain a maximum debt-to-equity ratio of 250%. As of March 2023, this ratio was around 124%, without incorporating the ZAR20 billion callable capital, which requires parliamentary approval for release.

Exhibit 3

### High capital buffers, a key strength

Sources: Moody's Financial Metrics and DBSA's financials

DBSA has historically benefitted from capital support from the government, including disbursements of around ZAR7.9 billion between 2013-16, and does not pay dividends, thereby retaining capital. DBSA's management is also monitoring economic capital requirements and plans to more formally apply the Basel principles, even though it is not a regulated bank. This will provide a more accurate estimate of the bank's risk-adjusted capital and will improve disclosures.

### Challenging operating environment, tight credit conditions and high credit concentrations pose risks to asset quality

We assign a weighted average asset risk score of B3, capturing DBSA's high single-name and sectoral concentrations, the difficult operating environment, problematic foreign projects and a high proportion of (under-performing) Stage 2 loans.

The bank reported an improvement in its nonperforming loans (NPLs)-to-gross loans ratio, which reduced to 3.3% as of March 2023 (down from 4.6% as of March 2022). However, Stage 2 remain substantial, accounting for 42.9% of gross loans (33.3% as of March 2022). We expect DBSA's asset-quality metrics to remain under pressure as a result of difficult operating environment - South Africa's real GDP growth rate is expected to settle at around 1.5% in 2024, well below the country's potential and economic growth rate required to create a reasonable amount of new jobs — and the high credit concentrations that exposes the bank to the vulnerability of

large NPLs in case of a default by a few borrowers. Loan Loss Reserves accounted for a low 11.5% of gross loans as of March 2023. The challenging operating environment is further exacerbated by the widespread load-shedding problems in the country, notably impacting economic performance.

DBSA continues to maintain high credit concentrations, with the bank's 10 largest exposures constituting around 61% of total assets. We view such high credit concentrations as a vulnerability to DBSA's asset risk profile because a default by any of these large borrowers could weaken the bank's solvency. Given its mandate, DBSA holds significant exposure to state-owned enterprises and to local municipalities, with the latter accounting for approximately one-third of its loan book as of March 2023. Although, DBSA's non-South African portfolio accounts for 29% of total gross loans, it is substantially riskier (specifically the Zambian and Madagascar exposures), where NPLs accounting for 68.2% of total NPLs.

Exhibit 4

#### High asset risks, as indicated by the high proportion of Stage 2 loans

Sources: The bank and Moody's Investors Service

Against these risks, we understand that management continues to tighten its lending criteria and will likely reduce some of the riskier foreign exposures, while the larger of its exposures to the South African municipal sector is in the more resilient Metro segment. Historically low write-offs also indicate that most borrowers eventually repay their dues to the DBSA. According to management, recoveries of non-performing loans amounted to ZAR2.2 billion over the past two years.

#### Profitability is trending upwards but remains subject to volatility

We assign a Ba3 profitability score, six notches below the initial score, reflecting historical and potential earnings volatility given DBSA's development mandate and related investments in riskier assets, and the still challenging credit conditions.

For fiscal 2023, DBSA reported net profit of ZAR5.2 billion (2022: ZAR3.8 billion), with the net income to average managed assets ratio at 4.9%. Net interest income increased by 13% in March 2023 to ZAR6.5 billion, and remains DBSA's dominant revenue source. Reported foreign-exchange gains of ZAR860 million (fiscal 2022: profit of ZAR156 million) and moderate provisioning costs of ZAR1.1 billion further supported the recovery in profits. DBSA's efforts to streamline its operations and contain its costs, allowed the company to achieve a stable cost-to-income ratio of 20% as of March 2023.

Going forward, we expect DBSA's earnings-generating capacity to remain both volatile and under pressure, in view of the still fragile operating conditions, and its limited revenue diversification (beyond interest income). Lower new loan disbursements — as management focuses on maintaining adequate liquidity that will allow it to meet its own liabilities — will also constrain revenue growth potential, while currency movements and revaluations of financial instruments will add to earnings volatility.

Exhibit 5

**Profitability has recovered but will likely remain volatile**

Sources: The bank and Moody's Investors Service

### Improving funding and liquidity conditions, with management maintaining its conservative policies amid the company's dependence on confidence-sensitive market funding

We assign weighted average cash flow and liquidity scores of B2, primarily to reflect the limited benefits derived from DBSA's very low secured debt (given the limited size and depth of the South African securitisation market) and the still fragile local debt capital market conditions.

DBSA has historically displayed a stable funding profile, and has been able to roll over maturing debt and raise new funding. The bank's total borrowings increased to ZAR58 billion as of March 2023 from ZAR35.9 billion in March 2013. The bank also maintains a relatively diversified funding profile by tapping the local debt capital markets most recently via an ZAR80 billion domestic medium-term note programme; gaining access to money-market funds and maintaining numerous lines of credits with local banks and financial institutions; and raising funds from international development finance institutions. DBSA has a projected funding pipeline in excess of ZAR16bn, which includes development finance institutions and commercial banks, of which approximately half have a tenor greater than 10 years.

However, DBSA's dependence on market funding leave it vulnerable to increased risk aversion by institutional investors, especially in the still-tight local capital market conditions, and given the short-term maturity profile for some of its liabilities (which the bank is trying to extend). DBSA has tapped local investors via private placements, but has also diversified its funding sources while lengthening the tenor of its liabilities by securing new funding from international developmental institutions. Management has also set an internal requirement to hold minimum liquidity of at least 10% of DBSA's liabilities.

As of November 2023, DBSA successfully repaid approximately ZAR4 billion of its DV23 bonds, demonstrating its strong cash and liability management, as well as its market access. Further debt repayments of over ZAR6 billion are projected for the remainder of the fiscal year, balanced against capital repayments and new funding to DBSA. The bank continues to focus on the diversification of its funding base through bilateral funding with DFIs and the management of funding spreads on new bond issuances.

### Operating environment

We assign a B1 score to DBSA's Operating Environment (at the upper end of the allowable range). The score is based wholly on our assessment of the (B) Industry Risk of South African industrial and infrastructure lenders, to reflect our expectations of high industry risks, with DBSA focused on higher-risk segments and clients — in response to its development mandate — and the ongoing macroeconomic challenges.

#### Macro-level indicator

The Macro-Level Indicator does not have any weight in the scorecard because the Macro-Level Indicator score (Baa2) is higher than the B Industry Risk score. We nonetheless note that macroeconomic conditions remain challenging, with persistently low growth and fiscal pressures, particularly in light of nationwide load shedding. Progress on structural economic reforms has been limited amid social and political obstacles, while interest payments are consuming an increasing share of the budget, reducing fiscal space.

#### Industry risk

The B Industry Risk score reflects finance companies' high market share in South Africa's industrial and infrastructure lending market; the current high demand, given the country's needs for infrastructure, energy and industrial projects; and a product base that faces

a low risk of obsolescence. Barriers to entry are moderate, with both banks and the capital markets in a position to provide lending for industrial and infrastructure projects, but to compete effectively, market participants need both access to long-term funding and sizeable initial capital.

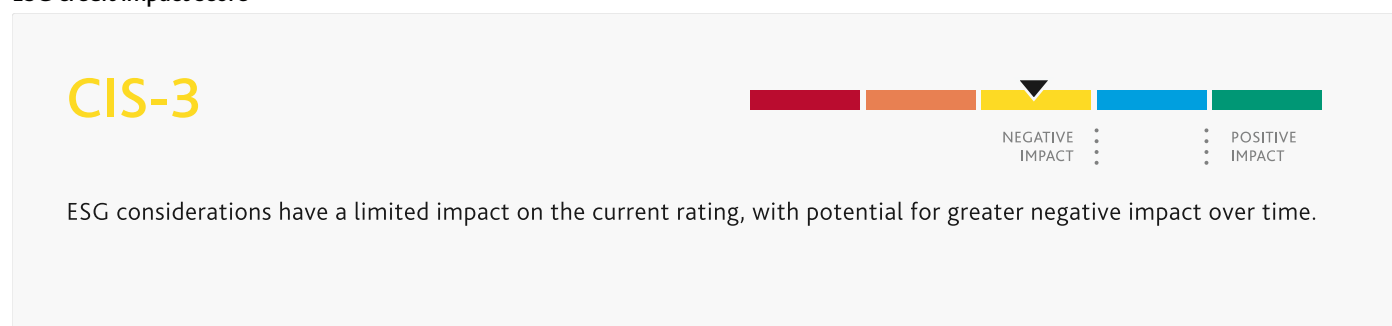

These strengths are, however, balanced against strong competition from the country's leading banks (which also translates into limited pricing power for finance companies) and relatively high regulatory/legal risks relating, for example, to upcoming land reforms. Industry risks have also been rising as government-owned finance companies are increasingly focused on high-risk segments, in line with their development mandate, and because of ongoing difficult macroeconomic conditions. These factors expose finance companies to increased event risk and to rising NPLs. Non-bank financial entities are also disadvantaged – relative to banks – in terms of their product suite, which remains narrower and primarily dependent on interest income.

## ESG considerations

### Development Bank of Southern Africa's ESG credit impact score is CIS-3

Exhibit 6

#### ESG credit impact score

Source: Moody's Investors Service

DBSA's **CIS-3** indicates limited impact of ESG considerations on the ratings to date, with a potential for greater negative impact over time. Government support and sizeable capital buffers currently mitigate the exposure to ESG risks, which stem from DBSA's counter-cyclical role and the influence of the government over its strategy that translate to high asset risks.

Exhibit 7

#### ESG issuer profile scores

Source: Moody's Investors Service

### Environmental

DBSA faces moderate environmental risks primarily because of its portfolio exposure to carbon transition and water management risks. In line with peers, it is facing mounting business risks and stakeholder pressure to meet broader carbon transition goals. In response, DBSA is developing its climate risk and portfolio management capabilities.

## Social

DBSA faces moderate social risks, partly reflecting its social and policy mandate linked to the company's government ownership. DBSA is also heavily exposed to local governments that are themselves exposed to social unrest, income inequalities and related social risks. DBSA has limited direct exposure to retail clients, which reduces the exposure to customer relations risk.

## Governance

DBSA's governance risks are moderate, reflecting its public ownership. Financial strategy and risk management is constrained by the bank's very high single-name and sector concentrations, partly reflecting the government's influence over its mandate and decision-making process. Governance risks are partly mitigated by DBSA's increased focus on risk management and improved management capabilities.

## Support and structural considerations

### Strong probability of government support, balancing the 100% government ownership against rising fiscal challenges

DBSA's Ba3 CFR benefits from a one-notch uplift from the bank's BCA of b1 because of a "strong" probability of support from the South African government. Our assumption of a strong probability of government support reflects DBSA's 100% government ownership, development mandate and history of receiving support. However, these parameters are moderated by fiscal pressures that compromise the South African government's ability to provide timely and adequate support to state-owned enterprises. Fiscal pressures reduce the capacity the government has available to provide further support to state-owned enterprises. Recent developments, such as the Land and Agricultural Development Bank's failure to make payments of maturing credit facilities that has triggered an event of default, have further informed our assessment.

The Minister of Finance, in his capacity as the bank's governor, determines the bank's mandate and holds the board of directors accountable for managing the organisation to deliver on its mandate. DBSA is regulated under the Public Finance Management Act and the DBSA Act, and submits a corporate plan to the National Treasury, which also documents the key performance measures and targets against which organisational performance is assessed.

### Notching considerations

DBSA's Ba3 issuer rating is based on our LGD analysis for speculative-grade companies, reflecting the priority of claims and coverage in the company's capital stock. In the case of DBSA, the issuer ratings are aligned with the CFR, reflecting the absence of structural subordination of unsecured obligations under our LGD model.

### National scale ratings

DBSA's Aa3.za long-term and P-1.za short-term South African national scale ratings are derived from the bank's global scale issuer rating. These ratings reflect the fact that DBSA is still one of the stronger credits in the country, primarily reflecting its high capital buffers and our assumption of a strong probability of government support in case of need.

### Source of facts and figures in this report

Unless noted otherwise, we have sourced data relating to systemwide trends and market shares from the central bank. Company-specific figures originate from DBSA's financial statements and Moody's Banking Financial Metrics. All figures are based on our own chart of accounts and may be adjusted for analytical purposes. Please refer to the document [Financial Statement Adjustments in the Analysis of Financial Institutions](#), published on 9 August 2018.

## Rating methodology and scorecard factors

The principal methodologies used in rating DBSA were [Finance Companies](#), published in November 2019, and [Government-Related Issuers](#), published in February 2020.
